- Before Startup

When operating the module, certain parts can carry
dangerous voltage! Ignoring the warnings can lead to

The module should only be installed and put into operation by qualified staff. The staff must have studied the warnings in these operating instructions
thoroughly.

The adjustment with the potentiometer on the fron may only be carried out with a screwdriver which is securely insulated against the input voltage! Do not select ranges during operation.

In applications with high operating voltages sufficient distance and isolation as well as shock protection must be ensured.
Safe and trouble-free operation of this device can only be guaranteed if transport, storage and installation are carried out correctly a
maintenance are carried out with care.

During assembly and configuration, protective be taken!

## Short description

The Voltage Monitors DG 3402 and DG 3482 are used to monitor limit values of $A C$ and $D C$ voltages. Two switching outputs can be analog control electronics as MIN or MAX alarm in open-circuit or analog control electronics as Mon or MAX alarm in open-circuit or yellow LEDs.

Two relay changeover contacts are available on the DG 3402. The DG 3482 is equipped with two isolated transistor switching contacts (open-collector), which can optionally work with pull-up resistors.
Input, power supply and the outputs are safely galvanically isolated from each other.

## - Functioning

The input signal will be compared with the set limit values. In case of overshooting or undershooting, the output relays react according to the set configuration.

- Configuration

All control elements are accessible by unlocking the front cover at the lower recess. The switching points and the switching hysteresis can
be adjusted with potentiometers. With the DIP switch the be adjusted with potentiometers. With the D
configuration is set according to the following table:

| S- | OFF | ON |
| :---: | :--- | :--- |
| $\mathbf{1}$ | Open-Circuit Operation | Closed-Circuit Operation |
| 2 | Hysteresis 0 to $6 \%$ | Hysteresis 0 to $60 \%$ |
| 3 | OUT 1 MAX Alarm | OUT 1 M MN Alarm |
| 4 | OUT 2 2 MAX Alarm | OUT 2 MIN Alarm |
| $\mathbf{5}$ | OUT 2 reacts to SET 2 | OUT 2 2 equals OUT 1 |
| 6 | Input AC | Input DC |

| $\mathbf{7}$ | $\mathbf{8}$ | Input Range |
| :---: | :---: | :--- |
| $\bullet$ |  | 50 V |
|  |  | 100 V |
| $\bullet$ | $\bullet$ | 300 V |
|  | $\bullet$ | 600 V |

Factory settings
all switches in position OFF

- = on

After configuration switch points and, if required, the hysteresis will be adjusted with the potentiometers on the front

1) Set potentiometer HYST to $0 \%$ (left stop)
2) Apply an input signal equal to the desired switch-on value to the input
3) Set the switching point with potentiometer SET 1 (or SET 2 if applicable) so that the LED just light up
Additional setting for operation with switching hysteresis:
4) Set potentiometer HYST to maximum (right stop)
5) Apply an input signal equal to the desired switch-off value to the input
6) Turn potentiometer HYST stepwise towards $0 \%$ until the LED 7) Check switch-on and switch-off point and readjust if necessar The hysteresis setting affects both outputs and can also be set directly according to the potentiometer scaling 0 ar or $60 \%$ one division mark corresponds to $1 \%$ or $10 \%$.

Note: The LEDs indicate the monitoring states (LED lights up when the input signal fulfills the switching condition). The LEDs indicate not the switching states of the relays, because these may be inverted due to open-circuit or closed-circuit operation.

Mounting, Electrical Connection

| Terminal assignments |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1.1 | Power supply + <br> Power supply |  | 2.1 | Input + Input - |  |
| 1.2 |  |  | 3.2 |  |  |
|  | OUTPUT 1 |  |  | OUTPUT 2 |  |
| 4.1 | ${ }^{\text {com }}$ | Out+ | 6.1 | Com | Out+ |
| 4.2 | NO | Out- | ${ }_{5}^{6.2}$ | NO | Out- |
| 5.1 | NC | Pull-Up | 5.2 | NC | Pull-Up |

| Technical Data |  |
| :---: | :---: |
| Input |  |
| Input ranges | $50 \mathrm{v}, 100 \mathrm{~V}, 300 \mathrm{v}, 600 \mathrm{~V}$ |
| Input resistance | 1,5 M $\Omega$ |
| Overload max. | 1000 V |
| Frequency | DC or $10 . . .500 \mathrm{~Hz}$ sinusoidal, switchable |
| Switch point setting | 0 ... $110 \%$ of input range with 12 -tum potentiometer, independently adjustable for each switching output |
| Hysteresis setting | $0 . . .6 \%$ or $0 . . .60 \%$ of input range |
| Output |  |
| DG 3402 | 2 SPDT Relays <br> AC: 250 V , max. 6 A, max. 1500 VA <br> DC: $250 \mathrm{~V} / 0.2 \mathrm{~A}, 115 \mathrm{~V} / 0.3 \mathrm{~A}, 30 \mathrm{~V} / 6 \mathrm{~A}$ <br> Recommended minimum load $300 \mathrm{~mW} / 5 \mathrm{~V} / 5 \mathrm{~mA}$ |
| DG 3 | 2 transistor switching contacts (open collector) optional with $10 \mathrm{k} \Omega$ pull-up resistor 30 VDC , max. 50 mA , residual voltage $<1,5 \mathrm{~V}$ fully isolated, not current limited |
| Status indication | one yellow LED per switching output |
| Response time | DC: approx. 20 ms AC: approx. 500 ms |
| General data |  |
| Set point error | < $0.2 \%$ full scale |
| Temperature coefficient) | < $150 \mathrm{ppm} / \mathrm{K}$ |
| Test voltage | $4 \mathrm{kV}, 50 \mathrm{~Hz}$, input against power supply against both outputs; $3 \mathrm{kV}, 50 \mathrm{~Hz}$, output 1 against output 2 |
| Working voltage ${ }^{2)}$ (Basic insulation) | 1000 V AC/DC for overvoltage category II and 600 V AC/DC for overvoltage category III according o DIN EN 61010 with pollution degree 2 between input, power supply and both switching outputs. Furthermore 300 V AC/DC between output 1 and output 2. |
| Protection against dangerous body currents ${ }^{2}$ | Protective separation according to DIN EN 61140 by reinforced insulation according to DIN EN 61010 up to $600 \mathrm{~V} \mathrm{AC/DC} \mathrm{at} \mathrm{overvoltage} \mathrm{category} \mathrm{II} \mathrm{and}$ degree 2 between input, power supply and both switching outputs. Furthermore 300 V AC/DC between output 1 and output 2 . |
| Power supply | $24 \mathrm{VDC}, \pm 15 \%, 0.7 \mathrm{~W}$ |
| Ambient temperature | Operation $\quad-20^{\circ} \mathrm{C}$ to $+60^{\circ} \mathrm{C}\left(-4\right.$ to $\left.+140^{\circ} \mathrm{F}\right)$ Transport and storage $-35^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}\left(-31\right.$ to $\left.+185^{\circ} \mathrm{F}\right)$ |
| EMC ${ }^{3}$ | EN 61326-1 |
| MTBF | 575 years acc. to SN 29500 , stationary continuous operating, $T_{\text {amb. }} 40^{\circ} \mathrm{C}$, Total FIT 198 |
| Construction | $12.5 \mathrm{~mm}\left(0,5^{\prime \prime}\right)$ housing, protection class: IP 20 mounting on 35 mm DIN rail acc. to EN 60715 |

- Dimensions

Connection data

| Connection | Screw termin |
| :---: | :---: |
|  | sc |
| Wire cross-section solid wire, fine-stranded or ferruled | AWG 30 - 14 |
| Stripped length | $7 \mathrm{~mm} / 0.3$ in |
| Screw terminal torque | $0.5 \mathrm{Nm} / 4.5 \mathrm{lff} \mathrm{in}$ |

## LIMITED WARRANTY

LIMITED WARRANTY
DRAGO Automation $G \mathrm{mbH}$ hereby warrants that the Product period of five (5) years from the date of delivery ("Limited Warranty"). This Limited Warranty is limited to repair or replacement at DRAGO's option and is effective only for the first end-user of the Product.
only if the Product:

1. is installed accord
2. is connected to a proper power supply;
3. is not misused or abused; and
4. there is no evidence of tampering, mishandling, neglect accidental damage, modification or repair without the
approval of DRAGO or damage done to the Product by anyone other than DRAGO
Delivery conditions are based upon the „GENERAL CONDITIONS FOR THE SUPPLY OF PRODƯCTS AND SERVICES OF THE ELECTRICAL AND ELECTRONICS NNDUSTRY" recommended by the Zentren
Elektrotechnik- und Elektronikindustrie (ZVEI) e.V.

Subject to change!
