Configurable
Ni Temperature Transmitter DT 45400

C

DT 45400

- Before Startup

When operating the signal converter, certain parts
! of the module can carry dangerous voltage of the module can carry dangerous volage!
lgnoring the warnings can lead to serious injury
and/or cause damage!

The signal converter should only be installed and put into operation by qualified staff. The staff must have studied the warnings in these operating instructions thoroughly.

The signal converter may not be put into operation if the housing is open.
In applications with high operating voltages sufficient distance and isolation as well as shock

Safe and trouble-free operation of this device can only be guaranteed if transport, storage and an maintenance are carried out with care

Appropriate safety measures against electrostatic discharge (ESD) should be taken during range selection and assembly on the transmitter.

## Short description

The configurable transmitter is designed for operating various N sensors. The measured value
into a current or voltage signal.
The configuration can be done either via DIP switch or via an USBinterface with the PC configuration program DRAGOset. A wid

The 3 -way isolation guarantees reliable decoupling of the sensor circuit from the processing circuit and prevents linked measurement
circuits from influencing each other. The auxiliary power can be supplied via the connection terminals or type-specific via the optional In-Rail-Bus connector (see accessories).

## - Configuration and startup

Configuring with DIP switch
Use the DIP switches to configure the device, according to table.
Configuring with software DRAGOset
Use the software DRAGOset to configure the device. Changes to the configuration and parameterization data can be performed both during operation with a connected measuring circuit and in a

The DRAGOset software is available for download free of charge at www.drago-automation.de
The device is equipped with a programming socket on the front. Use the DRAGOset USB Converter only for connecting the device to the parameterization DIP switch S1-1, 2, 3 have to be set ON!
Commissioning Function
The output supports a fast and simple testing of cabling and connection utton locam devices or measuring adjustment. Press the function button located behind the front cover for longer than 3 seconds. The (quick double off).
Output value:

| Output | $0 \%$ | $\boldsymbol{\pi}$ | $50 \%$ | $\boldsymbol{\pi}$ | $100 \%$ | $\boldsymbol{y}$ | $50 \%$ | $\boldsymbol{y}$ |

Commissioning Function by pressing the button again for 3 seconds Commissioning
or power off.

- Mounting, Electrical Connection

The transmitter is mounted on standard 35 mm DIN rail

## Terminal assignments

| Input |  |  |  |
| :---: | :---: | :---: | :---: |
| Sensor | Measuring Range | Standard | Characteristic |
| Ni100 | $-50 . . .+250{ }^{\circ} \mathrm{C}$ | DIN 43760 | тК6180 |

## IMITED WARRANTY

RAGO Automation GmbH hereby warrants that the Product will be free from defects in materials or workmanship for a period of five (5) years from the date of delivery ("Limited Warranty"). This Limited Warranty is limited to repair or replacement at DRAGO's option and is effective only for the
first end-user of the Product. This Limited Warranty applies only if the Product:

1. is installed according to the instructions fumished by DRAGO;
2. is connected to a proper power supply
3. there is no evidence of tampering, mishandling, neglect accidental damage, modification or repair without the approval of DRAGO or damage done to the Product by anyone other than DRAGO

Delivery conditions are based upon the GENERAL Deivery conditions are based upon the „GENERAL
CONDITIONS FOR THE SUPPLY OF PRODUCTS AND SERVICES OF THE ELECTRICAL AND ELECTRONICS NDDSTRY" recommended by the Zentralverband
